Nonresponsive based on revised scope

Attached is your macro quote.  
The best way to ship would be in a prefilled macro vault. See attached info sheet.

Thank You,

**Nonresponsive based on revised scope**

Did you know [www.wmsolutions.com](http://www.wmsolutions.com) is your ultimate source for all your industrial services?  
\* 24-hour access to profiling forms, procedures and regulatory information.  
\* Run, view, print or download transactional reports at any time, using your existing WM Solutions account.  
\* WM national locations, hours of operation, maps/directions, brochures and much more!

The waste is debris contaminated with pcb's and lead and cadmium. Approx. 40-80 tons. Also, I need to know how it needs to be shipped, and estimated cost of shipping from Nathalie, VA. Again, we are just looking for budgetary numbers, I will send an official RFQ at a later date.

Nonresponsive based on revised scope

Will it be for the same waste and same amount of tons?

Thank You,

It's mostly soil as I said yesterday afternoon. Any debris would be less than 3 by 3 by 3 and we have a roll off transporter set up already so we could transport

Emelle can handle - but we want to give a responsible offer

Could you please verify the Haz debris volume ? Does Env. Res. want to live load, or would we drop MACRO VAULTS / Boxes, and drop and swap ? Is this debris going to be < 3 foot in size or > 3 foot, is it suitable to drop in an aluminum bed dump trailer, "soft debris", or is it like concrete, that would need a steel roll-off. CWM Emelle can handle either way, however it makes a difference for the trans equipment.

Thank You,

Is this waste soil as well?

Thank You,

thank you for the quotation on the non haz soil from the Shiloh site. I am in the process of reviewing the bids for that work and will let you know asap. I have another waste stream that I would like you to take a look at and let me know if it could be accepted at Emelle for macro. Please take a look at the attached analytical and let me know what you think. The two attachments are analytical for the same waste stream. Let me know if you have any questions, thank you
